# Amelia Lake

## Pope County

#### Summary

Amelia Lake is a mesotrophic lake, with a medium amount of nutrients and algae. Algae concentration results (chlorophyll a) show that the lake experiences minor algae blooms most summers in August. There are no detectable trends in transparency, phosphorus or chlorophyll a levels over the past 20 years. This means that the lake is stable, with no indications of declining water quality. Amelia Lake has a good amount of historical water quality monitoring data, which makes a lake evaluation like this possible. Monitoring should continue to enable future water quality analyses.

### Lake Vitals

MN Lake ID: 61-0064-00 Ecoregion: North Central Hardwood Forest Major Watershed: Chippewa River Surface area (acres): 938.43 Littoral area (acres): 421.07 % Littoral area: 44.87 % Max depth: 68.1 (ft) 20.76 (m) Aquatic Invasive Species: None

#### Water Quality Characteristics

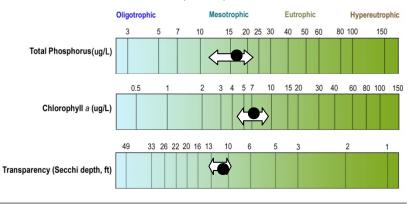

Years monitored: 1974, 1994 - 2016

<b>Parameters</b>	Historical	<b>2016</b>
Total Phosphorus Mean (ug/L):	20.0	<b>16.8</b>
Total Phosphorus Min (ug/L):	8.0	12.0
Total Phosphorus Max (ug/L):	50.0	21.0
Number of Observations:	122	5
Chlorophyll-a Mean (ug/L):	<b>7.6</b>	<b>7.2</b>
Chlorophyll-a Min (ug/L):	1.0	5.3
Chlorophyll-a Max (ug/L):	24.0	9.8
Number of Observations:	110	5
Secchi Depth Mean (ft):	<b>11.6</b>	<b>11.0</b>
Secchi Depth Min (ft):	6.5	10
Secchi Depth Max (ft):	27.0	12
Number of Observations:	122	5

## Trophic State Index

Trophic State: Mesotrophic (46)

The figure below shows the minimum and maximum values with the arrows and the mean with the black dot (site 201).

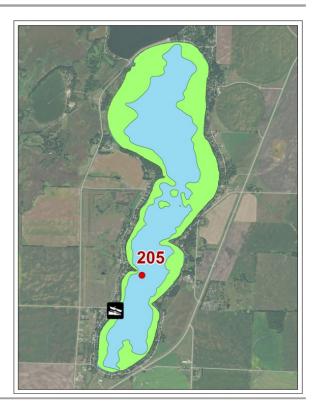

## **Ecoregion Comparisons**

(Primary site only. Comparisons are based on interquartile range, 25th - 75th percentile, for ecoregion reference lakes)

Ecoregion:	North Central Hardwood Forest
Total Phosphorus:	Below expected range, which means better than expected
Chlorophyll-a:	Within expected range
Secchi Depth:	Above expected range, which means better than expected

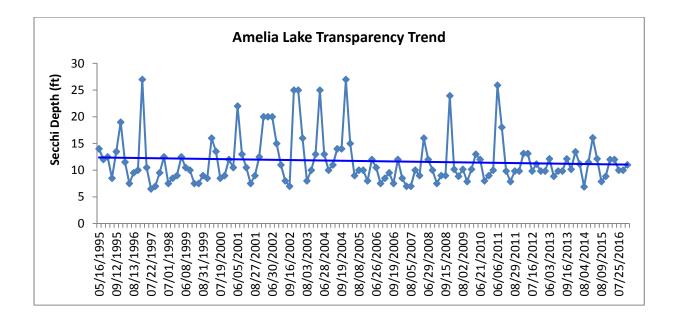

## **Trend Analysis Report**

In assessing water quality, agencies and other lake data users want to know if the amount of algae has been changing over time. Scientists test hypotheses using statistics, and the hypothesis used in a trend analysis is that no trend exists. In other words, we begin with the assumption that there is no trend. We collect data and use statistics to determine the probability of collecting our data if this hypothesis of no trend is indeed true. The output from a statistical test is called the probability value (or p-value for short) of collecting data given the hypothesis of no trend is true. The smaller this probability value, the more likely the null hypothesis of no trend can be rejected. The MPCA has set the acceptable p-value to be less than 10%. In other words, if p < 0.10 we reject the hypothesis of no trend and accept that a trend likely exists. Another way to think of this is to say that there is in reality an existing trend, there is a 90% chance we would have collected the data we collected and that a 10% chance that the trend is a random result of the data. For detecting trends, a minimum of 8-10 years of data with four or more readings per season are recommended by the MPCA. Where data does not cover at least eight years or where there are only few samples within a year, trends can be misidentified because there can be different wet years and dry years, water levels, weather, and etc., that affect the water quality naturally.

Amelia Lake had enough data to perform a trend analysis for all three parameters (Table 1). The data was analyzed using the Mann Kendall Trend Analysis.

Table 1. Trend analysis for Amelia Lake.

Lake Site	Parameter	Date Range	Trend
205	Transparency	1995-2016	No Trend
205	Total Phosphorus	1996-2016	No Trend
205	Chlorophyll-a	1996-2002, 2004-2011, 2013-2016	No Trend

Amelia Lake shows no evidence of water quality trends for any of the parameters monitored over the past 20 years. Overall, these trend results show that the water quality in Amelia Lake is stable, with no indication of decline. Monitoring should continue so that this trend can be tracked in future years.
